- ENGLISH - B2

ABOUT ME

As a disciplined and self-taught individual, I have been studying electronics and programming for a long time. I have taken programming-related courses and I am constantly learning and practicing to become a full-stack developer. I have also had the privilege of being mentored by a senior programmer throughout my journey.

I am passionate about designing and building websites, and am currently working on a clothes e-commerce site that integrates a database created with Cloud Firestore. I am eager to create more projects and add them to my portfolio.

I am seeking a company with a positive work environment, where I can continue to learn and grow as a professional. It is not important to me which specific stack I will be working with, as I am open to learning and expanding my skills in any area.
